

The Faculty of:	Faculty of Electrical Engineering and Informatics
Field of study:	Automatic Control and Robotics (ER)
Speciality:	ERK (Computer Control Systems)
Study degree (BSc, MSc):	BSc, first circle full time studies

COURSE UNIT DESCRIPTION

Course title:	Operation and safety of systems
Lecturer responsible for course:	Marcin Bednarek, PhD
Contacts: phone:	+48178651543 e-mail: bednarek@prz.rzeszow.pl
Department : Department of Computer and Control Engineering	

Semester	Weekly load	Type of classes				Number of ECTS credits
		L Lectures	C Theoretical Classes	Lb Laboratory	P Project	
6	3,67	25		15	15	4

Course description	
Lecture: Operation and maintenance. Basic definitions and operational characteristics. Maintenance system. System theory. Renewable and unrenewable technical systems. Human-engineering systems. Dependability of systems and automation systems. Diagnostics. Effect-potential system diagnosing. Diagnosing methods. System security. Redundant systems. Maintenance systems planning. Safety systems. Safety of DCS. Safety of industrial networks.	
Classes:	
Laboratory: System reliability indices. Diagnostic procedures. Systems security. Security of transmission systems. Supervision of system state. Analysis of operation process.	
Project: Planning, analysis and configuration of safety of systems and industrial networks in distributed control systems DCS. Operation and safety of systems – selected aspects	

Objectives of the course

Knowledge about: operation and maintenance (reliability and technical diagnostics) and security of technical systems (analysis and planning the security of systems).

Examination method

Written test, oral discussion (exam), written solution of design problems (project), reports on made exercises (laboratory)
